1. Introduction

SLD-1 is a new lantern controller that provides modern functionality for traditional filament based light system.

The Sabik SLD-1 is capable of controlling an external filament light source from 10-24VDC up to 10A. It can operate both twin filament lights as well as solenoid driven lamp-changers.

The SLD-1 is installed in a weather protecting box with cabling to a filament lamp or lamp changer, batteries and solar panel (s).

2. Technical Details

2.1. Standard Features

Low energy consumption in all operating stages (daytime idle, night-time active and between flashes).

Idle mode power consumption never exceeds 12 mW (1 mA @ 12VDC)

Lamp voltage configuration from 10VDC to 24VDC

Light Sensor with Bluetooth™ communication link for configuration and maintenance. Cable length ca 2m (6ft)

Daytime sensor calibrated in lux with user configurable levels

16A PWM solar panel charger with user controllable levels

Event log/black box that logs and stores all status changes in the lantern

Size: Width 125mm, Height 91mm, Depth 151mm

Weight: about 750 g (Lamp driver unit only). 1.1kg (with Light sensor and cable).

2.2. Optional Features

GSM monitoring with integrated GPS receiver as plug-in units

Power consumption of GSM monitoring less than 25 mW (2 mA) in average

3. Delivery contents

3.1. Standard delivery options

The SLD-1 unit with Light sensor Bluetooth

Sabik Lamp Driver

Light Sensor Bluetooth

The light sensor window should be facing north (if possible)

3.2. Optional accessories

GSM Rod Antenna (included with the optional GPS/GSM module).

GSM rod antenna

GPS antenna with cable (included with the optional GPS/GSM module).

GPS antenna assembled

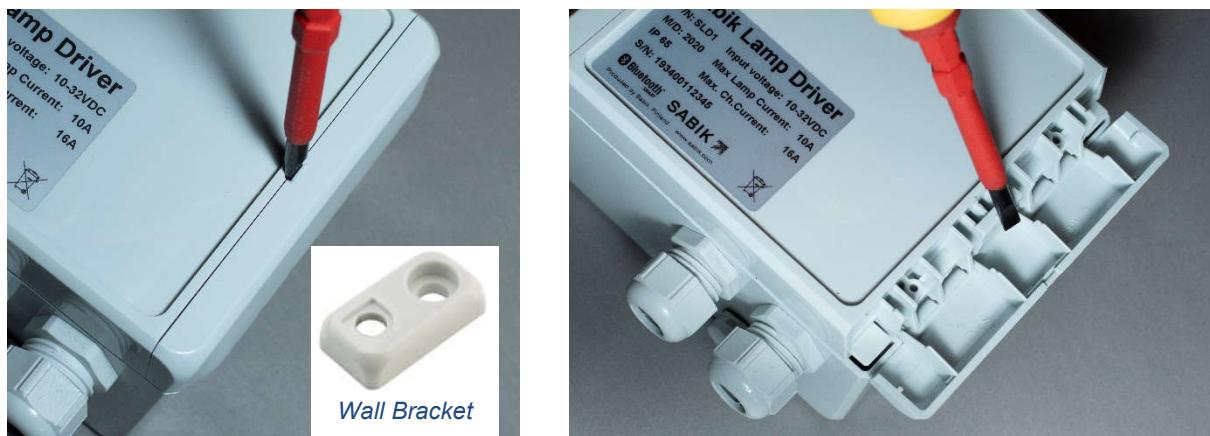

4. Installation

4.1. Mechanical Installation

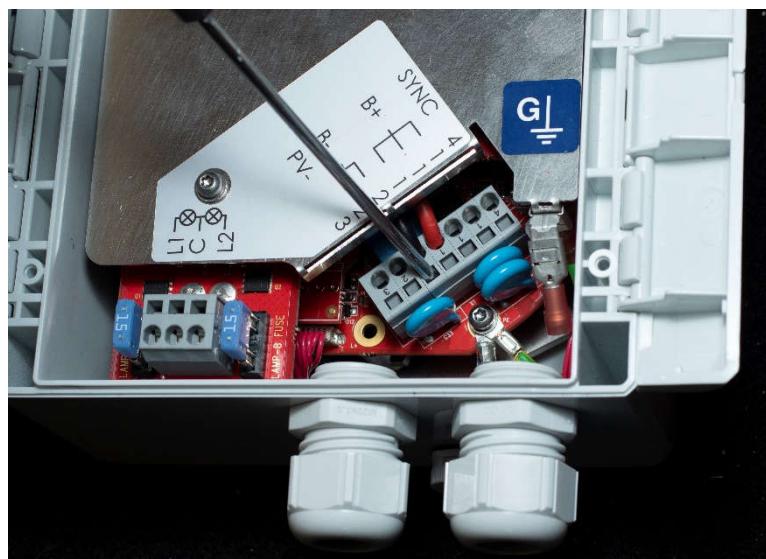

The Sabik SLD-1 should be installed in a weather-proof cabinet using 4 screws (or bolts) max diameter 4,5mm. The lid is opened with a flat head screw driver. The GPS and GSM antennas should be installed outside metal cabinets.

The enclosure can be fastened with 4 screws inside the box or with optional 4 wall brackets (outside the box)

How to Open the box.

4.2. Electrical Installation and Connections

Use a small flat head screwdriver to insert the leads.

Connect the Protective Earth (G) Terminal

Connect battery + to B +(1) Terminal. The connection should be Fused

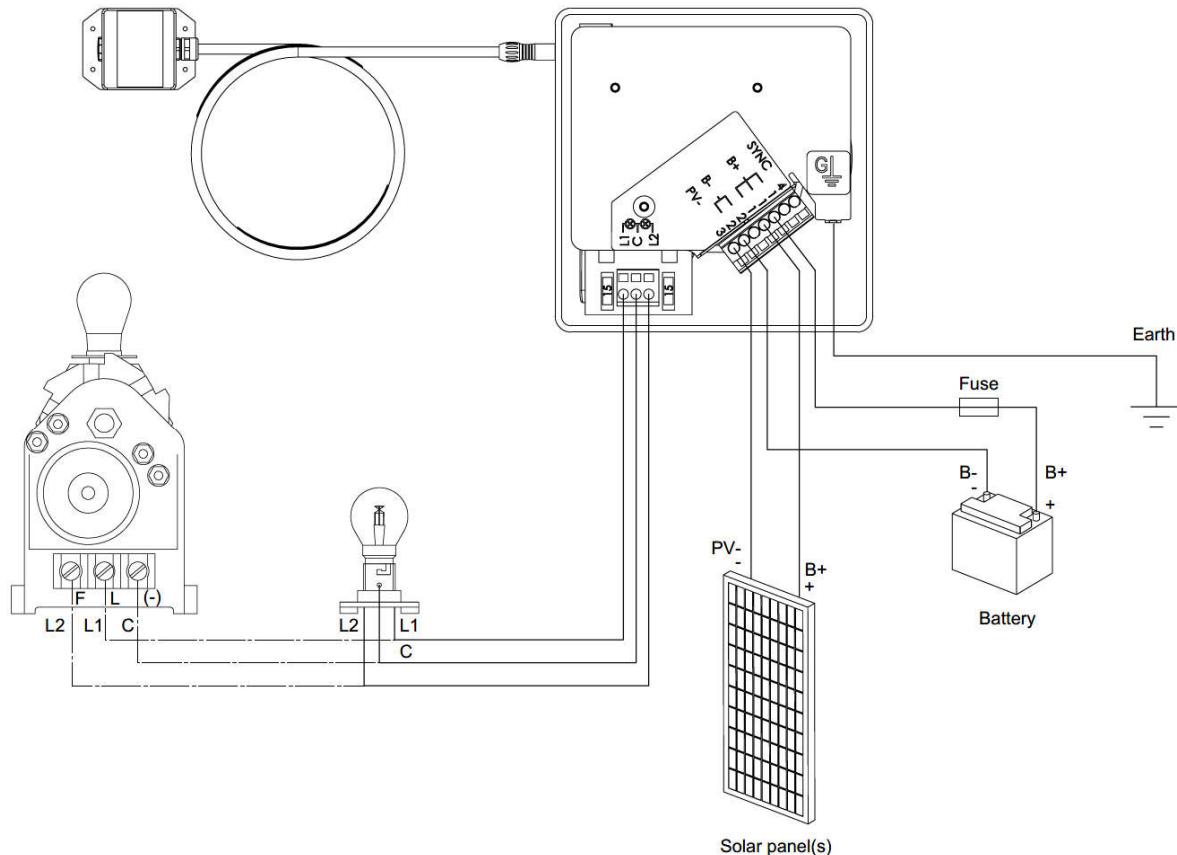

Connect battery – to B -(2) Terminal

Connect Solar panel B+ to free B+ Terminal

Connect Solar panel PV (-) to PV Terminal

Connect Lamp(s) to L1, C and L2

4.3. Wiring Diagram

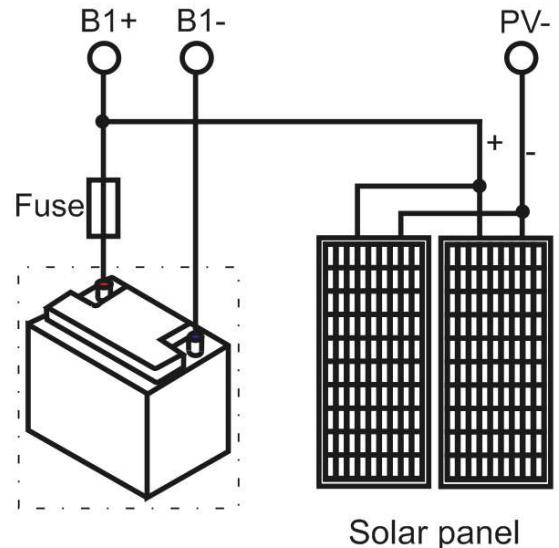

4.4. Solar Charger

A programmable solar panel regulator capable of handling up to 16A is integrated, enabling the SLD-1 to control solar panel charging directly without the need to install an external charger. The charger settings are programmable by the user enabling the Lamp Driver to be connected to various types of batteries and battery voltages.

The solar panel charger is a series-charging regulator with temperature compensation (built-in sensor). The solar panel output is controlled by Pulse Width Modulation (PWM) in order to optimize the charging process.

In the tables below you can find the typical settings for both lead acid and open cell nickel cadmium types of batteries in 12- and 24-volt systems.

For other types of batteries and other types of nominal voltages, please consult your battery manufacturer for the corresponding values.

4.5. Charger Settings 12V system

Charger Setting	Settings, 12V System	
	VR Lead Acid (default)	Nickel Cadmium
Cut In Voltage	13,8 Volts	14,8 Volts
Cut Out Voltage	14,4 Volts	15,2 Volts
Temperature Compensation	-10 mV/°C	-10 mV/°C

Charger Settings 24V system

Charger Setting	Settings, 24V System	
	VR Lead Acid	Nickel Cadmium
Cut In Voltage	27,6 Volts	29,6 Volts
Cut Out Voltage	28,8 Volts	30,4 Volts
Temperature Compensation	-10 mV/°C	-10 mV/°C

4.6. Various Power Supplies

In this section, a number of application examples are provided to assist choosing the right configuration.

4.6.1. Solar Battery With Photovoltaic

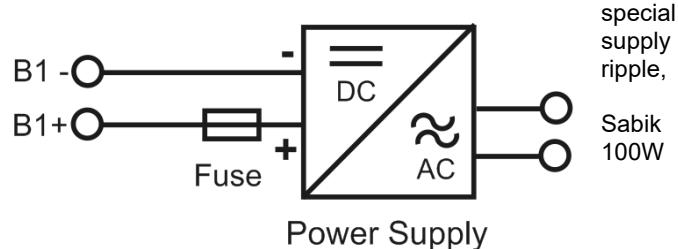

The maximum allowed solar panel current is 16A and must not be exceeded.

It is recommended to install a 16 A fuse as close to the battery as possible. Long cables will result in an energy loss due to the voltage drop in the cable. If the charging current exceeds 8A, use 2,5mm² cables.

For correct charging functionality, the corresponding solar panel charging parameters should be set in accordance with the battery technology used. See chapter 4.5 for recommended values for lead acid and Nickel Cadmium batteries.

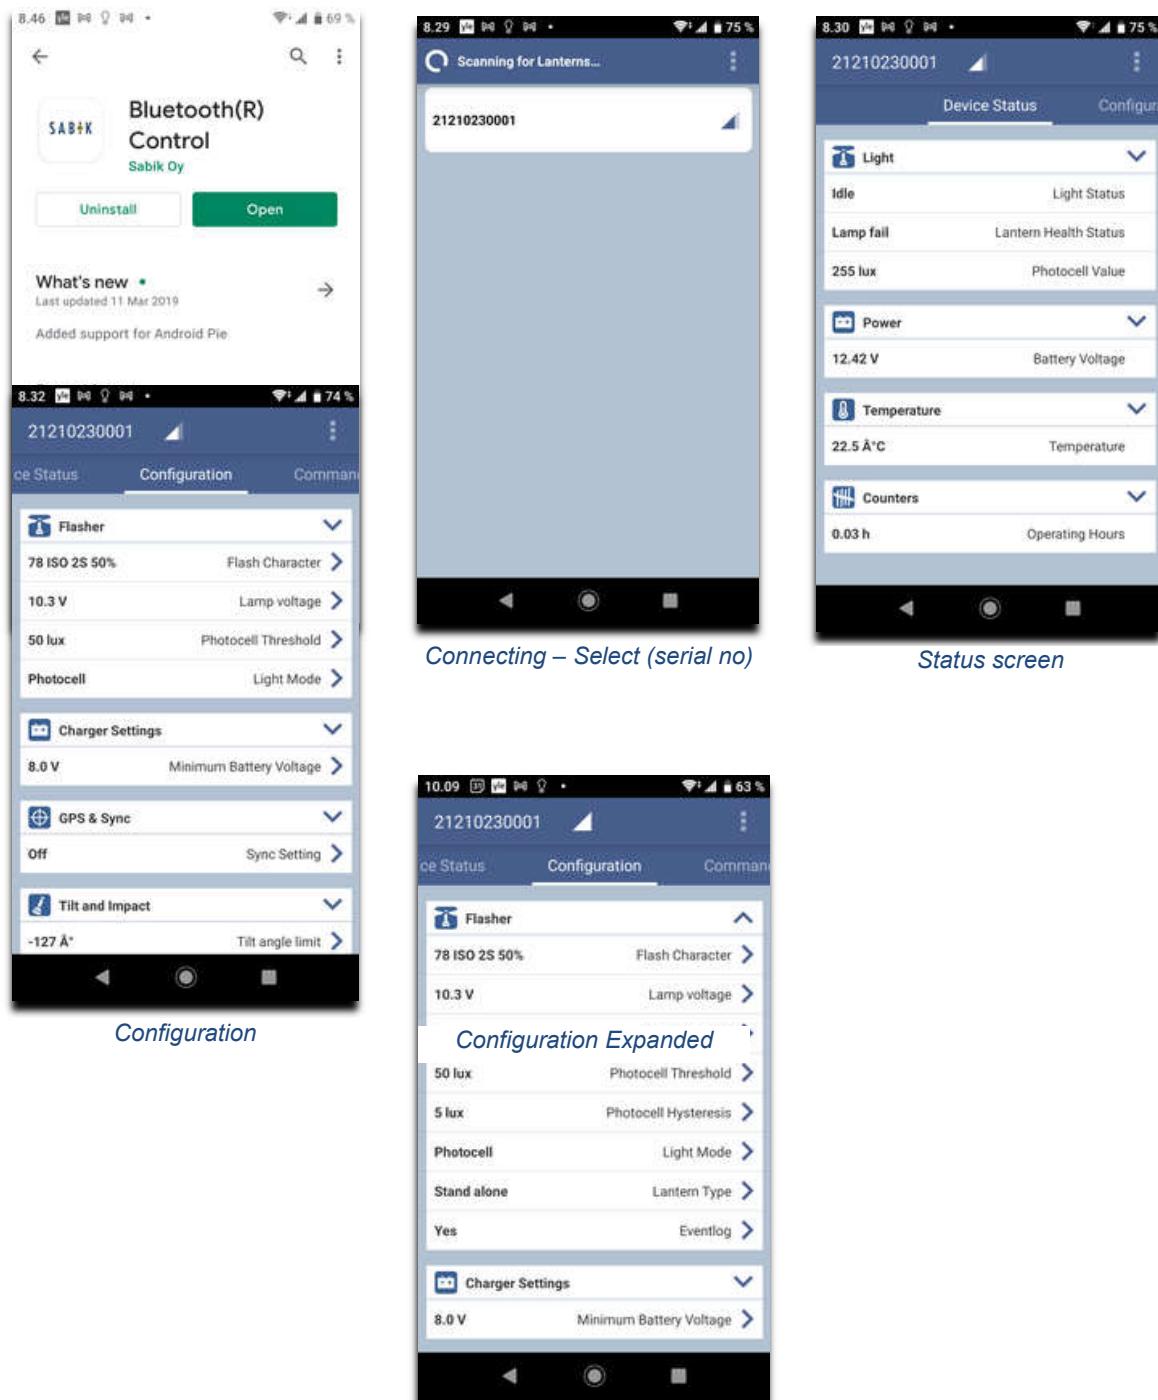

4.6.2. Other DC Power Supply

When using AC/DC main operated power supplies, attention should be paid to make sure that the power selected is capable of powering the unit. Especially the transient current capability and inductance should be checked against the requirement of the lantern. The PS series PS480 lamp can manage the rush current of 10.3V lamp

5. Programming

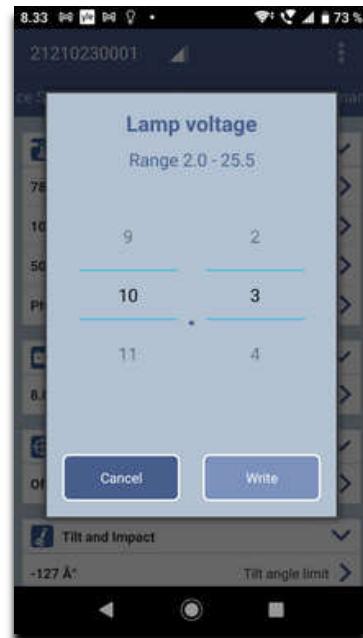

Programming the lantern can be done using Sabik Bluetooth™ app. Connect the Light Sensor BT and refer to the Sabik Bluetooth manual for programming instructions. Login using your credentials. Below are screen shots of the most important settings. You can also find the most common flash characters in the following chapter (Programming Tables).

The most important parameters are the Lamp voltage and Number of back-up lamps in (Backup lamps setting).

5.1. Lamp Voltage

The lamp voltage should be set to match the nominal voltage of the lamp in. The lamp voltage can be freely set between 10-28V but must always be at least 1V below the input voltage.

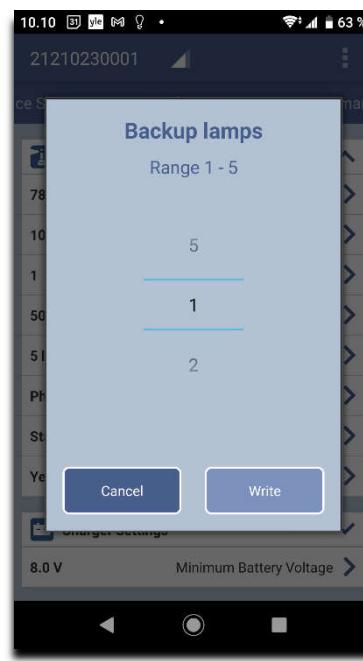

Lamp voltage

5.2. Number of lamps in use Backup lamps setting

This value should be set to one for a twin filament lamp. If a solenoid-based changer is used, please use the total number of spare lamps in the lamp changer. The maximum allowed value is 5 spare lamps.

Example: Lamp-changer with a total of 6 lamps, set the number of backup to 5.

Backup lamps

7. Order Codes

Description	Product Code
Sabik Lamp Drive	SLD-1
GPS Sync unit with external GPS antenna, cable and mounting kit	OPT4E
LightGuard remote monitoring GSM+GPS incl. GSM /GPS antennas	OPT9E

8. Environmental Guide

NOTICE!

Incorrect handling or improper disposal can cause danger to the environment!

There can be serious damage to the environment if substances hazardous to the environment are handled incorrectly and if they are disposed of incorrectly.

- Separate waste and dispose of it separately.
- Observe the disposal instructions on containers/packaging and safety data sheets.
- Have dangerous waste disposed of by companies specialising in disposal.
- Immediately take appropriate action if substances hazardous to the environment are accidentally released into the environment. If in doubt, inform the responsible local authority of the damage.

Disposal

- Have electronic scrap, electronic components, lubricants and other auxiliary materials disposed of by specialist disposal companies.
- If in doubt, obtain information on environmentally-friendly disposal from the local authority or specific disposal specialists.

Guidelines

Below you will find some guidelines:

Electronic components

Electronic components and electronic scrap are classified as special waste and may only be disposed of by authorised specialist disposal companies.

Metals, plastics, paper

Unless there is a return or disposal contract, the dismantled components must be sent for recycling:
Scrap metals.

Send plastic elements and paper for recycling.

Dispose of the remaining components according to their material compositions.

Greases, oils and other floating chemicals

Greases and oils contain toxic substances. They may not enter the environment. They must be disposed of by a company specialising in disposal.

Batteries

The batteries contained in the back-up power supply contain toxic substances. They may not enter the environment. They must be disposed of by a company specialising in disposal.

The Dismantling process

Proceed as follows to dismantle a device:

Unless there is a return or disposal contract, the dismantled components must be sent for recycling:

- Scrap metals.
- Plastic elements.

Sort the remaining components and dispose of them according to their material compositions.
